

THE PROBLEM WITH MASSIVE TRANSFUSIONS IN BLEEDING PATIENTS

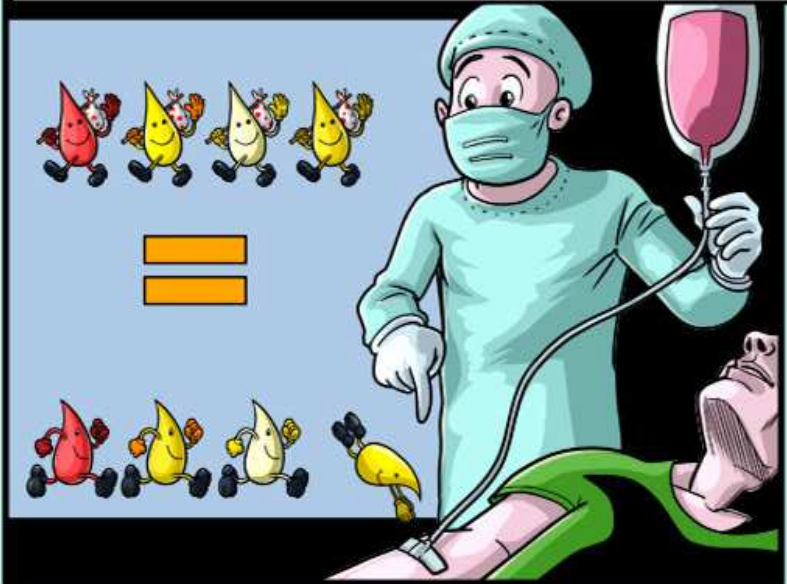

...AND WHY THE MTP SCOREKEEPER IS THE BEST SOLUTION!

DONATED BLOOD IS SPLIT INTO 4 COMPONENTS BECAUSE IT MAKES STORAGE EASIER AND BECAUSE SOME PATIENTS ONLY REQUIRE ONE PART

IN PATIENTS THAT ARE BLEEDING, THE 4 COMPONENTS OF BLOOD MUST BE TRANSFUSED IN THE SAME RATIO IT WAS REMOVED FROM THE BODY DURING DONATION

THIS IS LOGISTICALLY DIFFICULT BECAUSE DURING THE CHAOS OF A LIFE SAVING SURGERY, THE COMPONENTS ARRIVE FROM THE BLOOD BANK AT DIFFERENT TIMES. THIS IS BECAUSE THEY ARE THAWED OR PREPARED AT DIFFERENT SPEEDS

THE MTP SCOREKEEPER ALLOWS THE TRANSFUSION RATIOS TO BE ACCURATELY MONITORED TO ENSURE BEST PRACTICES AND ACCURATE RECORD KEEPING
